Environmental Report 4/18/16

Environmental Database Review

On 3/27/16, Winston Engineering mobilized to conduct a site investigation of material originally generated from the project site located on Edison St. in Geneva. The project location can be found in A.2b. Prior to the site investigation, an Environmental Database Review (EDR) was conducted (see A.5b). After reviewing the EDR report, Winston Engineering found multiple records in close proximity to the project site including historical auto stations and underground storage tanks.

Based on the fact the records were located in close proximity to the project site, the determination was made that additional sampling of the project site was necessary.

Soil Sampling

Four soil samples were collected at an approximate depth of two to three feet below grade. The samples were screened for fuels and volatiles with a Photoionization Detector (PID). PID readings were recorded as below background. Based on the composition of the soil and the project site dimensions, four samples were submitted to STAT Analysis. Two samples were tested for BTEX, PNAs, Lead, and pH. The locations of these samples can be found in A.2c.

Conclusion

Lab analysis found that the soil samples had below Maximum Allowable Concentrations of BTEX, PNAs, and Lead along with being in the acceptable pH range of 6.25 to 9.0 for CCDD or USFO disposal. Lab report can be found in A.4b.

RE: 2016 Geneva Streets Edison St, Edison St-Stevens St To Union St.

Dear Andy Paxson:

STAT Analysis received 4 samples for the referenced project on 3/29/2016 6:15:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
