2 Protective Coatings

Exceptions Noted

Comments:

Resubmit Data Sheets for the following systems, incorporating comments noted below.
(Product Sheets do not need to be resubmitted.)

1. System A2-F: Include supports and miscellaneous metal for equipment handling corrosive chemicals indoor per data sheet page 8.
2. System A6-F: Add "outdoor" after corrosive chemicals per Data Sheet page 8 and add "all iron and steel components of the silo structure in exterior locations" per Data Sheet page 5.
3. System A10-F: There should be one System A10-F sheet using coal tar epoxy. Delete the first two sheets and add these surface descriptions to the A10-F coal tar epoxy coating data sheet.
4. System C2: Revise surface description to read "Where indicated on the Drawings (including Chem Feed Room and CIP Area -- coordinate with Room Finish Schedule on Sheet A34), walls adjacent to corrosive chemical storage and feed equipment." See pages 10 and 16 of Section 09940, floors are to receive a different product.
5. System C2: Submit a second System C2 data sheet and include a surface description which reads "Where indicated on the Drawings (including Chem Feed Room and CIP Area -- coordinate with Room Finish Schedule on Sheet A34 and Section 09880), floors and curbed areas adjacent to corrosive chemical storage and feed equipment." See pages 10 and 16 of Section 09940, floors are to receive a different product.
6. System E5: This system is for submerged items; resubmit Figure 1 Data Sheet.
7. Systems F7 and G7: Split first coat (10 mils DFT) into two 5 mil coats. Total system thickness is acceptable; however, we would prefer to have the epoxy enamel applied in two coats to ensure coverage thicknesses.
8. System H12: Per specifications, the DFT is listed as 1 mil per coat, for a total DFT of 2 mils. Sherwin Williams product data sheets indicate a max DFT of .5 mils per coat. Confirm 2 mil DFT as submitted is acceptable.

Engineer's review of drawings and data submitted by Contractor covers only general conformity to the Drawings and Specifications, external connections, and dimensions which affect the layout. Engineer's review does not indicate a thorough review of all dimensions, quantities, and details of the material, equipment, devices, or item shown. Engineer's review shall not relieve Contractor of Contractor's responsibility for errors, omissions, or deviations in the drawings and data, nor of the Contractor's sole responsibility for compliance with the Contract Documents.

Very truly yours,

MACROPOXY® 646-100 FAST CURE EPOXY

PART A
PART B

B58-620
B58V620

SERIES
HARDENER

PRODUCT INFORMATION

Revised 6/06

PRODUCT DESCRIPTION	RECOMMENDED USES																																				
<p>MACROPOXY 646-100 FAST CURE EPOXY is a high solids, less than 100 g/L VPC, high build, fast drying, polyamide epoxy designed to protect steel and concrete in industrial exposures. Ideal for maintenance painting and fabrication shop applications. The high solids content ensures adequate protection of sharp edges, corners, and welds. This product can be applied directly to marginally prepared steel surfaces.</p> <ul style="list-style-type: none"> • Low VOC, <100 g/L • Low odor • Chemical resistant • Abrasion resistant 	<ul style="list-style-type: none"> • Marine applications • Fabrication shops • Pulp and paper mills • Power plants • Offshore platforms • Mill White and Black are acceptable for immersion use for salt water and fresh water, not acceptable for potable water • Suitable for use in USDA inspected facilities <ul style="list-style-type: none"> • Refineries • Chemical plants • Tank exteriors • Water treatment plants <p>Conforms to AWWA D102-03 OCS #5</p>

APPLICATION BULLETIN

Revised 6/06

SURFACE PREPARATION	APPLICATION CONDITIONS
<p>Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.</p> <p>Iron & Steel, Atmospheric Service: Minimum surface preparation is Hand Tool Clean per SSPC-SP2. Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. For better performance, use Commercial Blast Cleaning per SSPC-SP6/NACE 3, blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2 mils). Prime any bare steel within 8 hours or before flash rusting occurs.</p> <p>Iron & Steel, Immersion Service: Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2-3 mils). Remove all weld spatter and round all sharp edges by grinding. Prime any bare steel the same day as it is cleaned.</p> <p>Aluminum Remove all oil, grease, dirt, oxide and other foreign material by Solvent Cleaning per SSPC-SP1.</p> <p>Galvanized Steel Allow to weather a minimum of six months prior to coating. Solvent Clean per SSPC-SP1 (recommended solvent is VM&P Naphtha). When weathering is not possible, or the surface has been treated with chromates or silicates, first Solvent Clean per SSPC-SP1 and apply a test patch. Allow paint to dry at least one week before testing adhesion. If adhesion is poor, brush blasting per SSPC-SP7 is necessary to remove these treatments. Rusty galvanizing requires a minimum of Hand Tool Cleaning per SSPC-SP2, prime the area the same day as cleaned.</p> <p>Concrete and Masonry, Atmospheric Service: For surface preparation, refer to NACE 6/SSPC-SP13, or ICRI 03732, CSP 1-3. Surfaces should be thoroughly clean and dry. Concrete and mortar must be cured at least 28 days @ 75°F. Remove all loose mortar and foreign material. Surface must be free of laitance, concrete dust, dirt, form release agents, moisture curing membranes, loose cement and hardeners. Fill bug holes, air pockets and other voids with a cement patching compound. Weathered masonry and soft or porous cement board must be brush blasted or power tool cleaned to remove loosely adhering contamination and to get to a hard, firm surface. Laitance must be removed by etching with a 10% muriatic acid solution and thoroughly neutralized with water.</p> <p>Concrete and Masonry, Immersion Service: For surface preparation, refer to SSPC-SP13/NACE 6, Section 4.3.1 or 4.3.2, or ICRI 03732, CSP 1-3.</p> <p>Previously Painted Surfaces If in sound condition, clean the surface of all foreign material. Smooth, hard or glossy coatings and surfaces should be dulled by abrading the surface. Apply a test area, allowing paint to dry one week before testing adhesion. If adhesion is poor, or if this product attacks the previous finish, removal of the previous coating may be necessary. If paint is peeling or badly weathered, clean surface to sound substrate and treat as a new surface as above.</p>	<p>Temperature: 40°F minimum, 140°F maximum (air, surface, and material) At least 5°F above dew point</p> <p>Relative humidity: 85% maximum</p>
	<p style="text-align: center;">APPLICATION EQUIPMENT</p> <p>The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.</p> <p>Reducer/Clean Up Reducer R7K111 or Oxsol 100</p> <p>Airless Spray</p> <p>Pump 30:1 Pressure 2800 - 3000 psi Hose 1/4" ID Tip017" - .023" Filter 60 mesh Reduction As needed up to 10% by volume</p> <p>Conventional Spray</p> <p>Gun DeVilbiss MBC-510 Fluid Tip E Air Nozzle 704 Atomization Pressure .. 60-65 psi Fluid Pressure 10-20 psi Reduction As needed up to 10% by volume Requires oil and moisture separators</p> <p>Brush</p> <p>Brush Nylon/Polyester or Natural Bristle Reduction Not recommended</p> <p>Roller</p> <p>Cover 3/8" woven with phenolic core Reduction Not recommended</p> <p>If specific application equipment is listed above, equivalent equipment may be substituted.</p>

APPLICATION BULLETIN

APPLICATION PROCEDURES	PERFORMANCE TIPS																																												
<p>Surface preparation must be completed as indicated.</p> <p>Mix contents of each component thoroughly with power agitation. Make certain no pigment remains on the bottom of the can. Then combine one part by volume of Part A with one part by volume of Part B. Thoroughly agitate the mixture with power agitation. Allow the material to sweat-in as indicated prior to application. Re-stir before using.</p> <p>If reducer solvent is used, add only after both components have been thoroughly mixed, after sweat-in.</p> <p>Apply paint to the recommended film thickness and spreading rate as indicated below: Recommended Spreading Rate per coat: Wet mils: 7.0 - 13.5 Dry mils: 5.0 - 10.0* Coverage: 116 - 232 sq ft/gal approximate</p> <p>NOTE: Brush or roll application may require multiple coats to achieve maximum film thickness and uniformity of appearance. * See Recommended Systems</p> <p>Drying Schedule @ 7.0 mils wet and 50% RH:</p> <table border="1" data-bbox="212 1115 786 1346"> <thead> <tr> <th></th> <th>@ 40°F</th> <th>@ 77°F</th> <th>@ 100°F</th> </tr> </thead> <tbody> <tr> <td>To touch:</td> <td>4-5 hours</td> <td>2 hours</td> <td>1½ hours</td> </tr> <tr> <td>To handle:</td> <td>48 hours</td> <td>8 hours</td> <td>4½ hours</td> </tr> <tr> <td>To recoat:</td> <td></td> <td></td> <td></td> </tr> <tr> <td> minimum:</td> <td>48 hours</td> <td>8 hours</td> <td>4½ hours</td> </tr> <tr> <td> maximum:</td> <td>3 months</td> <td>3 months</td> <td>3 months</td> </tr> <tr> <td>Cure for</td> <td></td> <td></td> <td></td> </tr> <tr> <td> service:</td> <td>10 days</td> <td>7 days</td> <td>4 days</td> </tr> <tr> <td> immersion:</td> <td>14 days</td> <td>7 days</td> <td>4 days</td> </tr> </tbody> </table> <p>If maximum recoat time is exceeded, abrade surface before recoating. Drying time is temperature, humidity and film thickness dependent.</p> <table border="1" data-bbox="212 1409 786 1493"> <tbody> <tr> <td>Pot Life:</td> <td>10 hours</td> <td>4 hours</td> <td>2 hours</td> </tr> <tr> <td>Sweat-in-time:</td> <td>30 minutes</td> <td>30 minutes</td> <td>15 minutes</td> </tr> </tbody> </table> <p>Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.</p>		@ 40°F	@ 77°F	@ 100°F	To touch:	4-5 hours	2 hours	1½ hours	To handle:	48 hours	8 hours	4½ hours	To recoat:				minimum:	48 hours	8 hours	4½ hours	maximum:	3 months	3 months	3 months	Cure for				service:	10 days	7 days	4 days	immersion:	14 days	7 days	4 days	Pot Life:	10 hours	4 hours	2 hours	Sweat-in-time:	30 minutes	30 minutes	15 minutes	<p>Stripe coat all crevices, welds, and sharp angles to prevent early failure in these areas.</p> <p>When using spray application, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross spray at a right angle</p> <p>Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, roughness or porosity of the surface, skill and technique of the applicator, method of application, various surface irregularities, material lost during mixing, spillage, overthinning, climatic conditions, and excessive film build.</p> <p>Excessive reduction of material can affect film build, appearance, and adhesion.</p> <p>Do not mix previously catalyzed material with new.</p> <p>Do not apply the material beyond recommended pot life.</p> <p>In order to avoid blockage of spray equipment, clean equipment before use or before periods of extended downtime with Reducer R7K111 or Oxsol 100.</p> <p>Tinting is not recommended for immersion service.</p> <p>Use only Mil White for immersion service.</p> <p>Quik-Kick Epoxy Accelerator is acceptable for use. See data page 4.99 for details.</p> <p>Refer to Product Information sheet for additional performance characteristics and properties.</p>

PRODUCT INFORMATION

PRODUCT DESCRIPTION		RECOMMENDED USES																												
<p>ACROLON 218 HS acrylic polyurethane is a VOC compliant, polyester modified, aliphatic, acrylic polyurethane formulated specifically for in-shop applications. Also suitable for industrial applications. A fast drying, high gloss urethane that provides color and gloss retention for exterior exposure.</p> <ul style="list-style-type: none"> • Can be used directly over organic zinc rich primers (epoxy zinc primer and moisture cure urethane zinc primer) • Color and gloss retention for exterior exposure • Fast dry 		<p>Specifically formulated for in-shop applications. For use over prepared metal and masonry surfaces in industrial environments such as:</p> <ul style="list-style-type: none"> • Structural steel • Rail cars and locomotives • Conveyors • Bridges • Offshore platforms - exploration and production • Suitable for use in USDA inspected facilities <p>Conforms to AWWA D102-03, OCS #5&#6 Acceptable for use in high performance architectural applications.</p> <ul style="list-style-type: none"> • Tank exteriors • Pipelines • Ships

APPLICATION BULLETIN

Revised 6/05

SURFACE PREPARATION	APPLICATION CONDITIONS
<p>Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.</p> <p>Iron & Steel Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Commercial Blast Cleaning per SSPC-SP6/NACE 3. For better performance, use Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (1-2 mils). Prime any bare steel the same day as it is cleaned or before flash rusting occurs.</p> <p>Aluminum Remove all oil, grease, dirt, oxide and other foreign material by Solvent Cleaning per SSPC-SP1. Primer required</p> <p>Galvanized Steel Allow to weather a minimum of six months prior to coating. Solvent Clean per SSPC-SP1. When weathering is not possible, or the surface has been treated with chromates or silicates, first Solvent Clean per SSPC-SP1 and apply a test patch. Allow paint to dry at least one week before testing adhesion. If adhesion is poor, brush blasting per SSPC-SP7 is necessary to remove these treatments. Rusty galvanizing requires a minimum of Hand Tool Cleaning per SSPC-SP2, prime the area the same day as cleaned or before flash rusting occurs.</p> <p>Poured Concrete New For surface preparation, refer to SSPC-SP13/NACE 6, or ICRI 03732, CSP 1-3. Surfaces must be clean, dry, sound and offer sufficient profile to achieve adequate adhesion. Minimum substrate cure is 28 days at 75°F. Remove all form release agents, curing compounds, salts, efflorescence, laitance, and other foreign matter by sandblasting, shotblasting, mechanical scarification, or suitable chemical means. Refer to ASTM D4260. Rinse thoroughly to achieve a final pH between 8.0 and 10.0. Allow to dry thoroughly prior to coating.</p> <p>Old Surface preparation is done in much the same manner as new concrete, however, if the concrete is contaminated with oils, grease, chemicals, etc., they must be removed by cleaning with a strong detergent. Refer to ASTM D4258. Form release agents, hardeners, etc. must be removed by sandblasting, shotblasting, mechanical scarification, or suitable chemical means. If surface deterioration presents an unacceptably rough surface, Kem Cati-Coat Epoxy HS Filler/Sealer is recommended to patch and resurface damaged concrete. Fill all cracks, voids and bugholes with Steel Seam VSE</p> <p>Always follow the standard methods listed below: ASTM D4258 Standard Practice for Cleaning Concrete. ASTM D4259 Standard Practice for Abrading Concrete. ASTM D4260 Standard Practice for Etching Concrete. ASTM F1869 Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete. SSPC-SP 13/Nace 6 Surface Preparation of Concrete. ICRI 03732 Concrete Surface Preparation</p>	<p>Temperature: 40°F minimum, 120°F maximum (air, surface, and material) At least 5°F above dew point</p> <p>Relative humidity: 85% maximum</p>
	<p style="text-align: center;">APPLICATION EQUIPMENT</p> <p>The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compatible with the existing environmental and application conditions.</p> <p>Reducer/Clean Up: Spray Reducer R7K15 Brush/Roll Reducer #132, R7K132 If reducer is used, reduce at time of catalyzation.</p> <p>Airless Spray Pressure 2500 - 2800 psi Hose 3/8" ID Tip013" - .017" Filter 60 mesh Reduction As needed up to 15% by volume</p> <p>Conventional Spray Gun Binks 95 Cap 63P Atomization Pressure .. 50 - 70 psi Fluid Pressure 20 - 25 psi Reduction As needed up to 15% by volume</p> <p>Brush Brush Natural Bristle Reduction As needed up to 15% by volume</p> <p>Roller Cover 3/8" woven with phenolic core Reduction As needed up to 15% by volume</p> <p>If specific application equipment is not listed above, equivalent equipment may be substituted.</p>

APPLICATION BULLETIN

APPLICATION PROCEDURES	PERFORMANCE TIPS																																												
<p>Surface preparation must be completed as indicated.</p> <p>Mix contents of each component thoroughly with power agitation. Make certain no pigment remains on the bottom of the can. Then combine six parts by volume of Part A with one part by volume of Part B (premeasured components). Thoroughly agitate the mixture with power agitation. Re-stir before using.</p> <p>If reducer is used, add only after both components have been thoroughly mixed.</p> <p>Apply paint at the recommended film thickness and spreading rate as indicated below:</p> <p>Recommended Spreading Rate per coat: Wet mils: 4.5 - 9.0 Dry mils: 3.0 - 6.0 Coverage: 175 - 346 sq ft/gal approximate</p> <p>NOTE: Brush or roll application may require multiple coats to achieve maximum film thickness and uniformity of appearance.</p> <table border="0"> <tr> <td colspan="4">Drying Schedule @ 6.0 mils wet @ 50% RH:</td> </tr> <tr> <td></td> <td>50°F</td> <td>@ 77°F</td> <td>@ 120°F</td> </tr> <tr> <td>To touch:</td> <td>2 hours</td> <td>30 minutes</td> <td>20 minutes</td> </tr> <tr> <td>To handle:</td> <td>10 hours</td> <td>6 hours</td> <td>4 hours</td> </tr> <tr> <td>To recoat:</td> <td></td> <td></td> <td></td> </tr> <tr> <td> minimum:</td> <td>12 hours</td> <td>8 hours</td> <td>6 hours</td> </tr> <tr> <td> maximum:</td> <td>3 months</td> <td>3 months</td> <td>3 months</td> </tr> <tr> <td>To cure:</td> <td>14 days</td> <td>7 days</td> <td>5 days</td> </tr> <tr> <td>Pot Life:</td> <td>4 hours</td> <td>2 hours</td> <td>45 minutes</td> </tr> <tr> <td></td> <td colspan="3">(reduced 5% with Reducer R7K15)</td> </tr> <tr> <td>Sweat in Time:</td> <td>none</td> <td>none</td> <td>none</td> </tr> </table> <p>Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.</p>	Drying Schedule @ 6.0 mils wet @ 50% RH:					50°F	@ 77°F	@ 120°F	To touch:	2 hours	30 minutes	20 minutes	To handle:	10 hours	6 hours	4 hours	To recoat:				minimum:	12 hours	8 hours	6 hours	maximum:	3 months	3 months	3 months	To cure:	14 days	7 days	5 days	Pot Life:	4 hours	2 hours	45 minutes		(reduced 5% with Reducer R7K15)			Sweat in Time:	none	none	none	<p>Stripe coat all crevices, welds, and sharp angles to prevent early failure in these areas.</p> <p>When using spray application, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross spray at a right angle.</p> <p>Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, roughness or porosity of the surface, skill and technique of the applicator, method of application, various surface irregularities, material lost during mixing, spillage, overthinning, climatic conditions, and excessive film build.</p> <p>Excessive reduction of material can affect film build, appearance, and adhesion.</p> <p>Do not apply the material beyond recommended pot life.</p> <p>Do not mix previously catalyzed material with new.</p> <p>In order to avoid blockage of spray equipment, clean equipment before use or before periods of extended downtime with Reducer #15, R7K15.</p> <p>Mixed coating is sensitive to water. Use water traps in all air lines. Moisture contact can reduce pot life and affect gloss and color.</p> <p>E-Z Roll Urethane Defoamer is acceptable for use. See data page 5.99 for details.</p> <p>Refer to Product Information sheet for additional performance characteristics and properties.</p>

BLACK
HARDENER

PRODUCT DESCRIPTION		RECOMMENDED USES																												
<p>HI-MIL SHER-TAR EPOXY is a high build, polyamide cured, epoxy coal tar coating, which can be applied at high film thickness in one coat.</p>		<p>For use over prepared substrates such as steel and concrete in industrial environments.</p> <ul style="list-style-type: none"> • Penstocks • Dam gates • Petroleum storage tanks • Heavy duty structural coating • Non-potable water tank and pipe coating • Acceptable for use with cathodic protection systems <ul style="list-style-type: none"> • Liner for clarifiers • Marine applications • Offshore drilling rigs 																												
PRODUCT CHARACTERISTICS		PERFORMANCE CHARACTERISTICS																												
<p>Finish: Semi-Gloss</p> <p>Color: Black</p> <p>Volume Solids: 68% ± 2%, mixed</p> <p>Weight Solids: 77% ± 2%, mixed</p> <p>VOC (calculated): mixed Unreduced: <340 g/L; 2.8 lb/gal Reduced 25%: <430 g/L; 3.59 lb/gal</p> <p>Mix Ratio: 2 components, premeasured 3:1 4 gallons mixed</p> <p>Recommended Spreading Rate per coat: Wet mils: 24.0 - 35.0 Dry mils: 16.0 - 24.0 Coverage: 45 - 68 sq ft/gal approximate</p> <p>NOTE: Brush or roll application may require multiple coats to achieve maximum film thickness and uniformity of appearance.</p> <p>Drying Schedule @ 29.0 mils wet @ 50% RH:</p> <table border="1"> <thead> <tr> <th></th> <th>@ 50°F</th> <th>@ 77°F</th> <th>@ 100°F</th> </tr> </thead> <tbody> <tr> <td>To touch:</td> <td>10 hours</td> <td>8-10 hours</td> <td>2 hours</td> </tr> <tr> <td>To handle:</td> <td>48 hours</td> <td>48 hours</td> <td>6 hours</td> </tr> <tr> <td>To recoat:</td> <td></td> <td></td> <td></td> </tr> <tr> <td> minimum:</td> <td>24 hours</td> <td>16 hours</td> <td>8 hours</td> </tr> <tr> <td> maximum:</td> <td>72 hours</td> <td>48 hours</td> <td>16 hours</td> </tr> <tr> <td>To cure:</td> <td>7 days</td> <td>7 days</td> <td>7 days</td> </tr> </tbody> </table> <p>Pot Life: 6 hours 4 hours 1 hour</p> <p>Sweat-in-Time: 1 hour 30 minutes 15 minutes If maximum recoat time is exceeded, abrade surface before recoating. Drying time is temperature, humidity, and film thickness dependent.</p> <p>Shelf Life: 12 months, unopened Store indoors at 40°F to 100°F.</p> <p>Flash Point: 110°F PMCC, mixed</p> <p>Reducer/Clean Up: Reducer #54, R7K54</p>		@ 50°F	@ 77°F	@ 100°F	To touch:	10 hours	8-10 hours	2 hours	To handle:	48 hours	48 hours	6 hours	To recoat:				minimum:	24 hours	16 hours	8 hours	maximum:	72 hours	48 hours	16 hours	To cure:	7 days	7 days	7 days	<p>System Tested: (unless otherwise indicated) Substrate: Steel Surface Preparation: SSPC-SP6 1 ct. APPLICATION BULLETIN

Revised 6/06

SURFACE PREPARATION	APPLICATION CONDITIONS
<p>Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.</p> <p>Iron & Steel (atmospheric service) Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Commercial Blast Cleaning per SSPC-SP6/NACE 3. For better performance, use Near White Metal Blast Cleaning per SSPC-SP10/NACE 2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2 mils). Prime any bare steel the same day as it is cleaned or before flash rusting occurs.</p>	<p>Temperature: 50°F minimum, 120°F maximum (air, surface, and material) At least 5°F above dew point</p> <p>Relative humidity: 90% maximum</p>
<p>Iron & Steel (immersion service) Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10/NACE2. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (4 mils). Remove all weld spatter and round all sharp edges by grinding. Prime any bare steel the same day as it is cleaned or before flash rusting occurs.</p>	<h3>APPLICATION EQUIPMENT</h3>
<p>Galvanized Steel/Aluminum Allow to weather a minimum of six months prior to coating. Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1 (recommended solvent is VM&P Naphtha). Lightly brush blast per SSPC-SP 7 to provide a 2 mil profile.</p>	<p>The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.</p> <p>Reducer/Clean Up Reducer #54, R7K54</p> <p>Airless Spray</p> <p>Pressure 2500 - 3000 psi Hose 3/8" - 1/2" ID Tip031" Filter none Reduction As needed up to 25% by volume</p>
<p>Concrete For surface preparation, refer to SSPC-SP13/NACE 6, or ICRI 03732, CSP 1-3. All surfaces must be cured according to the supplier's recommendations. Remove all form release and curing agents by sandblasting, shot blasting, mechanical scarification, or suitable chemical means. Fill all cracks, voids and bugholes with Steel Seam VSE. Concrete must be free of moisture as much as possible (moisture seldom drops below 15% in concrete). Test for moisture or dampness by taping an 18 inch by 18 inch plastic sheet (4 mils thick) on the bare surface, sealing all of the edges. After a minimum of 16 hours, inspect for moisture, discoloration, or condensation on the concrete or the underside of the plastic. If moisture is present, the source must be located and the cause corrected prior to painting. Brush blasting required for immersion service.</p>	<p>Conventional Spray (bottom feed tank recommended)</p> <p>Gun Binks 95 Fluid Nozzle 66 Air Nozzle 63PB Atomization Pressure ... 60 psi Fluid Pressure 40 psi Reduction As needed up to 25% by volume</p> <p>Brush</p> <p>Brush Natural Bristle Reduction Not recommended</p> <p>Roller</p> <p>Cover 3/8" - 1/2" woven with phenolic core Reduction Not recommended</p>
	<p>If specific application equipment is not listed above, equivalent equipment may be substituted.</p>

PRODUCT DESCRIPTION		RECOMMENDED USES																																																				
<p>MACROPOXY 646 NSF FAST CURE EPOXY is a high solids, high build, fast drying, polyamide epoxy certified by NSF to Standard 61 as a tank lining for potable water storage tanks. The high solids content ensures adequate protection of sharp edges, corners, and welds.</p>		<ul style="list-style-type: none"> As an interior tank lining for potable storage water tanks of 1,500 gallon minimum tank size with standard cure and 100 gallon minimum tank size, 15" interior pipe - forced cure*** Conforms to AWWA D102-03 ICS #1, #2, and #5, and OCS #5*** Suitable for use with cathodic protection systems <p>***Refer to respective systems</p>

APPLICATION BULLETIN

Revised 7/06

SURFACE PREPARATION	APPLICATION CONDITIONS														
<p>Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.</p> <p>Carbon Steel, Immersion Service: Clean and degrease the surface prior to abrasive blasting per SSPC-SP 1 Solvent Cleaning. Methods described in SSPC-SP 1 include solvents, alkali, detergent/water, emulsions, and steam. The surface shall be abrasive blasted to SSPC-SP10/NACE No. 2 Near-White Blast Cleaning with a 2 - 3 mil profile. The anchor pattern shall be sharp with no evidence of a polished surface. The finished surface shall be free of all visible oil, grease, dust, dirt, mill scale, rust, coating, oxides, corrosion products, and other foreign matter with no more than 5% staining. After blasting, all dust and loose residue should be removed from the surface by acceptable means. Coat steel the same day as it is prepared and prior to the formation of rust.</p> <p>Iron & Steel, Atmospheric Service: Minimum surface preparation is Hand Tool Clean per SSPC-SP2. Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. For better performance, use Commercial Blast Cleaning per SSPC-SP6/NACE 3, blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2 mils). Prime any bare steel within 8 hours or before flash rusting occurs.</p> <p>Ductile Iron, Immersion Service: Refer to National Association of Pipe Fabricators Surface Preparations Standard NAF 500-03 as follows:</p> <ul style="list-style-type: none"> a. NAF 500-03-01 "Solvent Cleaning" b. NAF 500-03-02 "Hand Tool Cleaning" c. NAF 500-03-03 "Power Tool Cleaning" d. NAF 500-03-04 "Abrasive Blast Cleaning of Ductile Iron Pipe". <p>Concrete and Masonry, Immersion Service: Decontamination of the concrete surface requires the removal of oils, grease, wax, fatty acids and other contaminants and may be accomplished by the use of detergent scrubbing with a Sherwin-Williams cleaner and degreaser, low pressure water cleaning (less than 5,000 psi), steam cleaning, or chemical cleaning. The preferred methods for creating a surface profile, including the removal of dirt, dust, laitance and curing compounds, is abrasive blasting or scarifying to achieve an ICRI surface equivalent to CSP1-3. See ICRI Technical Guideline No. 03732 for additional information.</p> <p>Previously Painted Surfaces: If in sound condition, clean the surface of all foreign material. Scarify the surface to create the desired surface profile. Apply coatings on a test area, allowing paint to dry one week before testing adhesion. If adhesion is poor, or if this product attacks the previous finish, removal of the previous coating may be necessary.</p>	<p>Temperature: 40°F minimum, 110°F maximum (air, surface, and material) At least 5°F above dew point</p> <p>Relative humidity: 85% maximum</p> <tr> <th colspan="2" data-bbox="852 735 1490 787">APPLICATION EQUIPMENT</th> </tr> <p>The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.</p> <p>Reducer/Clean Up Reducer R7K15</p> <p>Airless Spray</p> <p>Pump 30:1 Pressure 2800 - 3000 psi Hose 1/4" ID Tip017" - .023" Filter 60 mesh Reduction As needed up to 10% by volume</p> <p>Brush</p> <p>Brush Nylon/Polyester or Natural Bristle Reduction As needed up to 10% by volume</p> <p>Roller</p> <p>Cover 3/8" woven with phenolic core Reduction As needed up to 10% by volume</p> <p>Recommended Spreading Rate per coat:</p> <table border="1"> <thead> <tr> <th></th> <th>Standard</th> <th>AWWA</th> </tr> </thead> <tbody> <tr> <td>Wet mils:</td> <td>4.2 - 8.3</td> <td>4.2 - 8.3</td> </tr> <tr> <td>Dry mils:</td> <td>3.0 - 6.0*</td> <td>3.0 - 6.0</td> </tr> <tr> <td>Coverage:</td> <td>192 - 384</td> <td>192 - 384</td> </tr> </tbody> </table> <p>sq ft/gal approximate</p> <p>*See recommended systems on product information page</p> <p>If specific application equipment is not listed above, equivalent equipment may be substituted.</p>	APPLICATION EQUIPMENT			Standard	AWWA	Wet mils:	4.2 - 8.3	4.2 - 8.3	Dry mils:	3.0 - 6.0*	3.0 - 6.0	Coverage:	192 - 384	192 - 384

PRODUCT INFORMATION	
RECOMMENDED SYSTEMS	SURFACE PREPARATION
<p>Steel, interior, up to 700°F: 2 cts. Silver-Brite Hi-Heat Resisting Aluminum Paint @ 0.4 - 0.5 mils dft/ct</p>	<p>Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.</p> <p>Refer to product Application Bulletin for detailed surface preparation information.</p> <p>Minimum recommended surface preparation: Iron & Steel, below 500°F: SSPC-SP6 Iron & Steel, above 500°F: SSPC-SP10 0.5 - 1.0 mils profile</p>
	TINTING
	Do not tint.
	APPLICATION CONDITIONS
	<p>Temperature: 50°F minimum, 120°F maximum (air, surface, and material) At least 5°F above dew point</p> <p>Relative humidity: 85% maximum</p> <p>Refer to product Application Bulletin for detailed application information.</p>
	ORDERING INFORMATION
<p>Packaging: 1 and 5 gallon containers</p> <p>Weight per gallon: 7.50 ± 0.2 lb.</p>	
SAFETY PRECAUTIONS	
<p>Refer to the MSDS sheet before use.</p> <p>Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.</p>	
DISCLAIMER	WARRANTY
<p>The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative to obtain the most recent Product Data Information and Application Bulletin.</p>	<p>The Sherwin-Williams Company warrants our products to be free of manufacturing defects in accord with applicable Sherwin-Williams quality control procedures. Liability for products proven defective, if any, is limited to replacement of the defective product or the refund of the purchase price paid for the defective product as determined by Sherwin-Williams. NO OTHER WARRANTY OR GUARANTEE OF ANY KIND IS MADE BY SHERWIN-WILLIAMS, EXPRESSED OR IMPLIED, STATUTORY, BY OPERATION OF LAW OR OTHERWISE, INCLUDING MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.</p>

SILVER-BRITE® HI-HEAT RESISTING ALUMINUM PAINT

B59S3

APPLICATION BULLETIN		Revised 4/05
SURFACE PREPARATION	APPLICATION CONDITIONS	
<p>Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.</p> <p>Iron & Steel, atmospheric service, below 500°F Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Commercial Blast Cleaning per SSPC-SP6. For better performance, use Near White Metal Blast Cleaning per SSPC-SP10. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (0.5-1.0 mil maximum). Coat any bare steel the same day as it is cleaned or before flash rusting occurs.</p> <p>Iron & Steel, atmospheric service, above 500°F Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. Minimum surface preparation is Near White Metal Blast Cleaning per SSPC-SP10. Blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (0.5-1.0 mil maximum). Coat any bare steel the same day as it is cleaned or before flash rusting occurs.</p>	<p>Temperature: 50°F minimum, 120°F maximum (air, surface, and material) At least 5°F above dew point</p> <p>Relative humidity: 85% maximum</p>	
	APPLICATION EQUIPMENT	
	<p>The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.</p> <p>Reducer Not recommended</p> <p>Clean Up Mineral Spirits, R1K4</p> <p>Airless Spray Pressure 2000 psi Hose 1/4" ID Tip015"</p> <p>Conventional Spray Gun Binks 95 Fluid Nozzle 63C Air Nozzle 63PB Atomization Pressure .. 60 psi Fluid Pressure 20 psi</p> <p>Brush Brush Natural Bristle</p> <p>Roller Cover 1/4" woven with phenolic core</p> <p>If specific application equipment is not listed above, equivalent equipment may be substituted.</p>

SILVER-BRITE® HI-HEAT RESISTING ALUMINUM PAINT

B59S3

APPLICATION BULLETIN

APPLICATION PROCEDURES	PERFORMANCE TIPS																						
<p>Surface preparation must be completed as indicated.</p> <p>Lightly stir before use. Do not shake with mechanical shaker or overly agitate, as a dull, nonuniform, mottled appearance will result.</p> <p>For best results, apply to a cool surface between 50°F -100°F. As the temperature rises sufficiently to burn off the vehicle, the aluminum fuses to the surface, becoming an integral part of the metal. Do not use a metal primer.</p> <p>Apply in a thin, even coat, carefully following the coverage and film build recommendations. A heavy, uneven coat will fail at elevated temperatures due to the combustion gases formed by disintegration of the aluminum paint binder, causing "pop-ups" in the paint film. Allow the first coat to dry 10-12 hours before applying the second coat.</p> <p>Apply paint at the recommended film thickness and spreading rate as indicated below:</p> <p>Recommended Spreading Rate per coat:</p> <table border="0"> <tr> <td>Wet mils:</td> <td>2.0 - 2.5</td> </tr> <tr> <td>Dry mils:</td> <td>0.4 - 0.5 (critical)</td> </tr> <tr> <td>Coverage:</td> <td>640 - 760 sq ft/gal approximate</td> </tr> </table> <p>Drying Schedule @ 2.0 mils wet @ 50% RH:</p> <table border="0"> <tr> <td></td> <td>@50°F</td> <td>@ 77°F</td> <td>@100°F</td> </tr> <tr> <td>To touch:</td> <td>4 hours</td> <td>2-3 hours</td> <td>30 minutes</td> </tr> <tr> <td>To recoat:</td> <td>18 hours</td> <td>10 hours</td> <td>3 hours</td> </tr> <tr> <td>To cure:</td> <td>12 days</td> <td>10 days</td> <td>3 days</td> </tr> </table> <p>Drying time is temperature, humidity, and film thickness dependent.</p> <p>Special care should be exercised while using this product for maximum performance. Film thickness and surface preparation are critical. Be especially concerned at lap areas and when using airless spray. Excessive film thickness will cause blistering and peeling. Insufficient film thickness may lead to premature rusting of the surface.</p> <p>Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.</p>	Wet mils:	2.0 - 2.5	Dry mils:	0.4 - 0.5 (critical)	Coverage:	640 - 760 sq ft/gal approximate		@50°F	@ 77°F	@100°F	To touch:	4 hours	2-3 hours	30 minutes	To recoat:	18 hours	10 hours	3 hours	To cure:	12 days	10 days	3 days	<p>Stripe coat all crevices, welds, and sharp angles to prevent early failure in these areas.</p> <p>When using spray application, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross spray at a right angle.</p> <p>Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, roughness or porosity of the surface, skill and technique of the applicator, method of application, various surface irregularities, material lost during mixing, spillage, overthinning, climatic conditions, and excessive film build.</p> <p>In order to avoid blockage of spray equipment, clean equipment before use or before periods of extended downtime with Mineral Spirits, R1K4.</p> <p>For best results, apply to a cool surface between 60°F -90°F.</p> <p>Do not apply at greater than 0.5 mils dft/ct.</p> <p>Refer to Product Information sheet for additional performance characteristics and properties.</p>
Wet mils:	2.0 - 2.5																						
Dry mils:	0.4 - 0.5 (critical)																						
Coverage:	640 - 760 sq ft/gal approximate

MACROPOXY® 646 PW
POTABLE WATER EPOXY

PART A B58WX610 MILL WHITE
PART A B58LX600 LIGHT BLUE
PART B B58VX600 HARDENER

PRODUCT INFORMATION		Revised 3/07																																												
PRODUCT DESCRIPTION	RECOMMENDED USES																																													
<p>MACROPOXY 646 PW EPOXY is a high solids, high build, fast drying, polyamide epoxy classified by UL to ANSI/NSF 61 as a tank lining for potable water storage tanks. The high solids content ensures adequate protection of sharp edges, corners, and welds.</p>	<ul style="list-style-type: none"> • As an interior tank lining for potable water storage tanks of 1,500 gallon minimum tank size. • Conforms to AWWA D102-03 ICS #1, #2, and #5, and OCS #5*** • Suitable for use with cathodic protection systems <p>***Refer to respective systems</p>																																													
PRODUCT CHARACTERISTICS	PERFORMANCE CHARACTERISTICS

APPLICATION BULLETIN

APPLICATION PROCEDURES	APPLICATION TIPS																																																				
<p>Surface preparation must be completed as indicated.</p> <p>Mix contents of each component thoroughly with power agitation. Make certain no pigment remains on the bottom of the can. Then combine one part by volume of Part A with one part by volume of Part B. Thoroughly agitate the mixture with power agitation. Allow the material to sweat-in as indicated prior to application. Re-stir before using.</p> <p>If reducer solvent is used, add only after both components have been thoroughly mixed, after sweat-in.</p> <p>Apply paint to the recommended film thickness and spreading rate as indicated below:</p> <p>Recommended Spreading Rate per coat:</p> <table border="1"> <tr> <td></td> <td>Standard</td> <td>AWWA</td> </tr> <tr> <td>Wet mils:</td> <td>7.0 - 13.5</td> <td>4.2 - 8.3</td> </tr> <tr> <td>Dry mils:</td> <td>5.0 - 10.0*</td> <td>3.0 - 6.0*</td> </tr> <tr> <td>Coverage:</td> <td>116 - 232</td> <td>192 - 384</td> </tr> </table> <p>NOTE: brush or roll application may require multiple coats to achieve maximum film thickness and uniformity of appearance.</p> <p>* See Recommended Systems on reverse side</p> <p>Drying Schedule @ 7.0 mils wet and 50% RH:</p> <table border="1"> <tr> <td></td> <td>@ 40°F</td> <td>@ 77°F</td> <td>@ 100°F</td> </tr> <tr> <td>To touch:</td> <td>4-5 hours</td> <td>2 hours</td> <td>1½ hours</td> </tr> <tr> <td>To handle:</td> <td>48 hours</td> <td>8 hours</td> <td>4½ hours</td> </tr> <tr> <td>To recoat:</td> <td></td> <td></td> <td></td> </tr> <tr> <td> minimum:</td> <td>48 hours</td> <td>8 hours</td> <td>4½ hours</td> </tr> <tr> <td> maximum:</td> <td>3 months</td> <td>3 months</td> <td>3 months</td> </tr> <tr> <td>Cure for immersion:</td> <td></td> <td></td> <td></td> </tr> <tr> <td> 14 days</td> <td>7 days</td> <td>4 days</td> <td></td> </tr> </table> <p>If maximum recoat time is exceeded, scarify surface before recoating.</p> <p>Drying time is temperature, humidity and film thickness dependent.</p> <p>For Potable Water Service, allow a minimum cure time of 7 days at 77°F prior to placing in service. Sterilize and rinse per AWWA C652.</p> <table border="1"> <tr> <td>Pot Life:</td> <td>10 hours</td> <td>4 hours</td> <td>2 hours</td> </tr> <tr> <td>Sweat-in-time:</td> <td>30 minutes</td> <td>30 minutes</td> <td>15 minutes</td> </tr> </table> <p>Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance.</p>		Standard	AWWA	Wet mils:	7.0 - 13.5	4.2 - 8.3	Dry mils:	5.0 - 10.0*	3.0 - 6.0*	Coverage:	116 - 232	192 - 384		@ 40°F	@ 77°F	@ 100°F	To touch:	4-5 hours	2 hours	1½ hours	To handle:	48 hours	8 hours	4½ hours	To recoat:				minimum:	48 hours	8 hours	4½ hours	maximum:	3 months	3 months	3 months	Cure for immersion:				14 days	7 days	4 days		Pot Life:	10 hours	4 hours	2 hours	Sweat-in-time:	30 minutes	30 minutes	15 minutes	<p>Stripe coat all crevices, welds, and sharp angles to prevent early failure in these areas.</p> <p>When using spray application, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross spray at a right angle</p> <p>Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, rough-ness or porosity of the surface, skill and technique of the applicator, method of application, various surface irregularities, material lost during mixing, spillage, over thinning, climatic conditions, and excessive film build.</p> <p>Excessive reduction of material can affect film build, appearance, adhesion and UL ANSI/ NSF 61 approval.</p> <p>Do not mix previously catalyzed material with new.</p> <p>Do not apply the material beyond recommended pot life.</p> <p>In order to avoid blockage of spray equipment, clean equipment before use or before periods of extended downtime with Reducer R7K15.</p> <p>Tinting is not recommended for immersion service.</p> <p>Quik-Kick Epoxy Accelerator is acceptable for atmospheric use.</p> <p>Do not use Quik-Kick Epoxy Accelerator for immersion service when UL certification is required.</p> <p>Holiday Detection: Use a wet sponge-type detector such as KD Bird Dog or equivalent equipment per manufacturer's recommendation. Test only cured coating, as solvent entrapment in fresh films may provide false readings.</p> <p>Refer to Product Information sheet for additional performance characteristics and properties.</p>

APPLICATION BULLETIN

Revised 3/07

SURFACE PREPARATION	APPLICATION CONDITIONS														
<p>Surface must be clean, dry, and in sound condition. Remove all oil, dust, grease, dirt, loose rust, and other foreign material to ensure adequate adhesion.</p> <p>Carbon Steel, Immersion Service: Clean and degrease the surface prior to abrasive blasting per SSPC-SP 1 Solvent Cleaning. Methods described in SSPC-SP 1 include solvents, alkali, detergent/water, emulsions, and steam. The surface shall be abrasive blasted to SSPC-SP10/NACE No. 2 Near-White Blast Cleaning with a 2 - 3 mil profile. The anchor pattern shall be sharp with no evidence of a polished surface. The finished surface shall be free of all visible oil, grease, dust, dirt, mill scale, rust, coating, oxides, corrosion products, and other foreign matter with no more than 5% staining. After blasting, all dust and loose residue should be removed from the surface by acceptable means. Coat steel the same day as it is prepared and prior to the formation of rust.</p> <p>Iron & Steel, Atmospheric Service: Minimum surface preparation is Hand Tool Clean per SSPC-SP2. Remove all oil and grease from surface by Solvent Cleaning per SSPC-SP1. For better performance, use Commercial Blast Cleaning per SSPC-SP6/NACE 3, blast clean all surfaces using a sharp, angular abrasive for optimum surface profile (2 mils). Prime any bare steel within 8 hours or before flash rusting occurs.</p> <p>Ductile Iron, Immersion Service: Refer to National Association of Pipe Fabricators Surface Preparations Standard NAPP 500-03 as follows:</p> <ul style="list-style-type: none"> a. NAPP 500-03-01 "Solvent Cleaning" b. NAPP 500-03-02 "Hand Tool Cleaning" c. NAPP 500-03-03 "Power Tool Cleaning" d. NAPP 500-03-04 "Abrasive Blast Cleaning of Ductile Iron Pipe". <p>Concrete and Masonry, Immersion Service: Decontamination of the concrete surface requires the removal of oils, grease, wax, fatty acids and other contaminants and may be accomplished by the use of detergent scrubbing with a Sherwin-Williams cleaner and degreaser, low pressure water cleaning (less than 5,000 psi), steam cleaning, or chemical cleaning. The preferred methods for creating a surface profile, including the removal of dirt, dust, laitance and curing compounds, is abrasive blasting or scarifying to achieve an ICRI surface equivalent to CSP1-3. See ICRI Technical Guideline No. 03732 for additional information.</p> <p>Previously Painted Surfaces: If in sound condition, clean the surface of all foreign material. Scarify the surface to create the desired surface profile. Apply coatings on a test area, allowing paint to dry one week before testing adhesion. If adhesion is poor, or if this product attacks the previous finish, removal of the previous coating may be necessary.</p>	<p>Temperature: 40°F minimum, 110°F maximum (air, surface, and material) At least 5°F above dew point</p> <p>Relative humidity: 85% maximum</p> <tr> <th colspan="2" data-bbox="820 743 1453 791">APPLICATION EQUIPMENT</th> </tr> <p>The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics. Always purge spray equipment before use with listed reducer. Any reduction must be compliant with existing VOC regulations and compatible with the existing environmental and application conditions.</p> <p>Reducer/Clean Up Reducer R7K15</p> <p>Airless Spray</p> <p>Pump 30:1 Pressure 2800 - 3000 psi Hose 1/4" ID Tip017" - .023" Filter 60 mesh Reduction As needed up to 10% by volume</p> <p>Brush</p> <p>Brush Nylon/Polyester or Natural Bristle Reduction As needed up to 10% by volume</p> <p>Roller</p> <p>Cover 3/8" woven with phenolic core Reduction As needed up to 10% by volume</p> <p>Recommended Spreading Rate per coat:</p> <table border="1"> <thead> <tr> <th></th> <th>Standard</th> <th>AWWA</th> </tr> </thead> <tbody> <tr> <td>Wet mils:</td> <td>4.2 - 8.3</td> <td>4.2 - 8.3</td> </tr> <tr> <td>Dry mils:</td> <td>3.0 - 6.0*</td> <td>3.0 - 6.0</td> </tr> <tr> <td>Coverage:</td> <td>192 - 384</td> <td>192 - 384</td> </tr> </tbody> </table> <p>sq ft/gal approximate</p> <p>*See recommended systems on product Information page</p> <p>If specific application equipment is not listed above, equivalent equipment may be substituted.</p>	APPLICATION EQUIPMENT			Standard	AWWA	Wet mils:	4.2 - 8.3	4.2 - 8.3	Dry mils:	3.0 - 6.0*	3.0 - 6.0	Coverage:	192 - 384	192 - 384
